

## Message for Hungar

Definitely have a bowl with a spine in it Don't make it all pool coping make it for everybody to ride definitely 5 to 6 feet tall about a 5 foot spine in the bowl put a park and a street section

Bowl please! And please make it happen! 😊

Build it strong to handle the midwestern weather and various types of riders (bike, scooter, skateboard...)

Build wide ramps and build longer, taller transitions. These 4' wide obstacles being built often could be so much better if you didn't have to hit it straight on and could carve across it to do your trick. Also Ramps made really small with super tight transitions are not fun to ride. Maximize the ramps potential by making them the correct Bump to rail, a good pyramid not steep, a frame with rail in the middle.

Check other successful skateparks:

Hammond/Hessville Park

Grant Park Skatepark

Roselle, IL Skatepark

Concrete park with lights! LIGHTS LIGHTS LIGHTS!

Concrete, good amount of space between obstacles

Cruising is a big part of my skating, I'd love to be able to have a smooth cruise throughout the park Davenport, Iowa.

Vail, Colorado.

Riverside Skatepark Detroit, Michigan.

Don't build it in a bad area. Also a covered area for shade.

Dyer skatepark perfect hip, with better run up

For designs it would be good to have a flowing park not a park like Hessville, the CP skatepark right now flows and no one usually gets snakes because it's a good setup so something like our old one but with a new twist and Hessville continuous flow

Honestly considering that we already have many parks that include a lot of transition it would be nice to have a street plaza park. Hessville skatepark was just built in the area this year and many people from all over drive 1+ hours to skate the bowl and the transition section and I don't think people from crown point would mind to just drive there rather than building another permanent skatepark with a bowl when we already have one in the area. This area is lacking on street plaza parks like "Westchester (California)", "Surprise Farms (Arizona)", "El Sereno (California)". These are all parks that people in the area that have been skating for atleast 5 years like. Many of the most experienced skateboarders in our area have been wanting a more street style park since we have a nice park that has plenty transition. Considering that the old crown point skatepark was mostly transition it will be hard to get the locals to be on board with a more street style park but many people don't realize there I haven't been skating for a long time, and a lot of my choices here were based on my inexperience, including lower stair counts and the quarter as opposed to a halfpipe. Although I'd love to have my suggestions included in the park, don't forget more experienced skaters who can use the more difficult obstacles more than I can. I would hope the park could come out a little more street oriented than the rest of the parks around here. Using transition elements to flow the park along make sense but by no means should the park be transition based I would like a park that flows really well, it still has its own sections with their own purpose, but I want it to feel I would like to have the new park be as much like the old park as possible. I also don't want any transitions to I would really like a bowl with different sizes

It has to be a good combination of street and transitions

Just a nice skate plaza it's been a park setup for years time to change and let street riders get a chance at just maintain it so it doesn't get run down

just more of an open concept and not these flow parks they make today where everyone has to start at the same end and you have to wait for six people to go.

Just simple nothing crazy pro  
Keep the spirit of the current park as a guide to build something better than what is there  
Lots of transition not street and it's really steep  
Lots of transition not street and it's so steep  
Lots of transition than street obstacles  
Make sure the transition isn't too steep  
Love the current park but without the holes  
MINI RAMP AND PYRAMID  
Mostly transition, yet basic street elements as well.

Nice flow. Opposite of Dyer. Absolutely nothing like the Schererville skatepark.  
Not super steep but kinda steep.  
Only riders aloud  
Please add lights that stay on till at least 10 to 11. It is very hard to get to the skatepark during the day with work schedules. Lights would be well appreciated by everyone in the action sports community.  
Please consider long term durability when choosing the material for the park.  
Please do something fun for everyone. I love the design of the park in Peru Indiana. You guys build beautiful parks I'm stoked to see how Crown Point is going to be.  
Please don't make it all transition.  
Please keep it the same  
Please no street plaza. Go to Chase Bank downtown for that shit. Banks, quarters, hips, bowls!  
Really nice transition with a good line to take on scooter/bike  
Really nice transition with a good line to take on scooter/bike  
Setup like Hestville park  
Shelter area.. concession area or vending machines.. good lighting.. a good way to monitor it so it doesn't get  
That the skateboard park doesn't leave any unused space and makes it compact enough.  
The layout should not have a lot of obstacles crammed together. The space needs to be utilized properly.  
The park designs just need to have a good flow. In my opinion  
The park designs just need to have a good flow. In my opinion  
Very bike friendly  
Wood Ramps Please  
You guys are great at designing parks with good flow. Our community would also love a park with good flow.  
If stairs are of high demand please just try to incorporate them to not interrupt the flow.
